EMPLOYMENT DETAILS

Company Name :	Infosys Ltd
Job Title :	Systems Engineer
Duration :	9 th June, 2014 to Present

PROJECTS DETAILS

Client	Myself
Duration	1 st Oct, 2015 to Present (on weekends)

URL: <http://karthik-venkata.azurewebsites.net>

Description: I wanted to create my personal web site to learn and showcase my above mentioned skills. Some highlights are:

- HTML 5 Canvas animation on home page which activates on hovering over my name.
- Created using BootStrap for responsive design and some amazing features like scroll-spy etc.

- Ajax Post using SOAP to a web service which then uploads the details of contact me section to a MySQL DB
- Have not spent a single rupee on hosting.

Client	A fortune 100 Company
Duration	1 st Jan , 2015 to Present

Description: Client has lot of apps on its on-premises SharePoint servers. The project is to migrate them to SharePoint 2013 and host them in the cloud supported by Microsoft Azure.

My job is to upgrade the content databases, fix unghosted pages, fix UI and functionality issues which arise after migration, write PowerShell scripts to update list data to fix issues etc. and then hand over the database to the release management team to be uploaded to Azure.

Client	A fortune 100 Company
Duration	1 st Nov , 2014 to 1 st Jan, 2015

Description: Client had a problem that one of its most used site collection's size was well over the Microsoft's recommended limit and the rate of increase was very high. The DB was split into 9 parts. I was given the task of writing a timer job which monitors the size every day and sends out emails to groups of people concerned.

If the size of any DB reaches 90% of the recommended limit, then a new DB, a new site collection should be created in the DB. The old DB must become read-only. Permissions, Branding, settings etc. must be copied from the old site collection to the newly created ones and emails should be sent out.

ACHIEVEMENTS
